

終極神話單聲道後級

MONO POWER AMPLIFIER

SET 100 ULTIMATE

SET-100 Ultimate is a 120W single-ended class A hybrid amplifier with a magic midrange of a small S.E.T amplifier, the scale, authority, macro and micro detail that no amplifier has ever achieved until now, combining power and drive with transparency, musical involvement and above all with music sounding naturally.

Also, direct sounding, musical, with more instrument body, lower frequency extension, frightening dynamics and most of all magically three dimensional.

ABSOLUTE SOUND GOLDEN EAR AWARD
FOR SET-100 ULTIMATE

愛琴海單聲道後級

MONO POWER AMPLIFIER

AELIUS

A monoblock configuration and hybrid design using a valve in the input stage with valve rectification and a mosfet output stage producing 200Wpc in 8 ohm (350Wpc in 4 ohm and 450 Wpc in 2 ohm) with 60 W in pure class A.

STEREOPHILE CLASS A RATING

A revolutionary product combining the Single Ended sonic purity and Push Pull power, with a ground lift switch easily accessible on the rear panel, this amplifier can be implemented into any system.

STEREO PREAMPLIFIER

PST-100 MKII 聖島前級

STEREOPHILE CLASS A RATING

PST-100 mk2 is most certainly an impressive addition to YPSILON's product line.

It approaches the concept of pre amplification in an outstanding way. Its heart lies in the in- house made transformers used for attenuation.

In addition its valve active gain stage combined with exquisite materials and transformer coupling, produce the finest and most transparent sound.

The power supply, based in valve rectification and choke regulation, complements the performance of

the valve gain stage in an harmonic way.

Offering the convenience of a remote control PST100 mk2 is a must have component for a "no holds" system.

"For now, the Ypsilon PST-100 Mk.II is the most transparent and, therefore, the most perfect audio component I have ever heard-or not heard."

M. Fremer Stereophile 6/2011

STEREO INTEGRATED AMPLIFIER

PHAETHON 神殿合并機

Phaethon integrated amplifier is a unique product in many aspects. It uses many of the technical solutions developed in our Aelius monoblock amplifier and PST100mk2 preamplifier in a compact and elegant design, which offering unmatched sound quality.

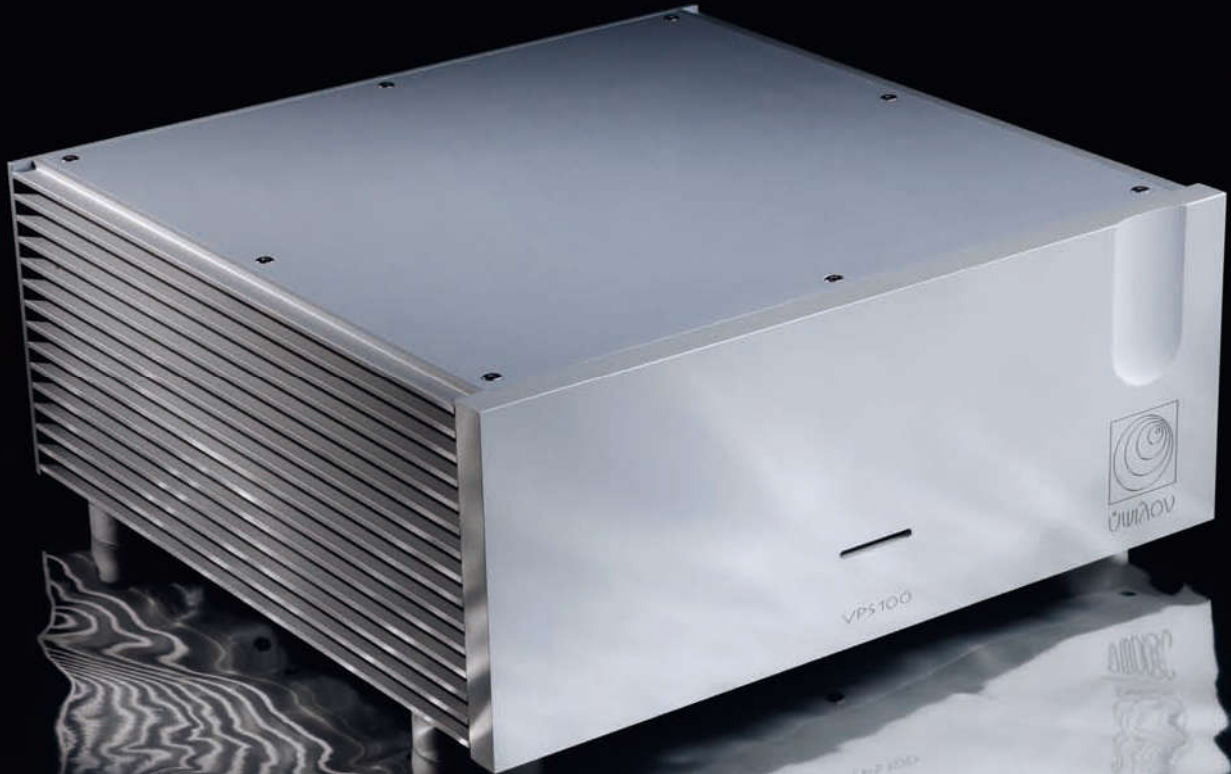

MM PHONO PREAMPLIFIER

VPS-100 神廟唱放

STEREOPHILE CLASS A+ RATING

By implementing YPSILON's specially designed and manufactured, in house RIAA and MC step up transformers and by using the best core materials available the outcome is that of analogue audio at its very best.

Using such a phono stage the long lost true brilliance of the classic turntable is reinvented and revived, making the music, literally, leap from the record grooves and emerge into the domain of today's digital world reminding everyone what true music sounds like.

升壓變壓器

MC STEP UP TRANSFORMER

MC 10/MC 16/MC 20

The MC series moving coil step-up transformers are used to amplify the low level output signal from a moving coil cartridge bringing it to the appropriate level to drive a moving magnet phono preamp.

The MC series transformers are large size single C-core double coil transformers using a proprietary amorphous core material. Special winding techniques were developed in order to minimize inter-winding capacitances and maintain wide frequency response. They are optimized sonically to be as invisible as possible.

The transformers are shielded with mu-metal and are potted in 10mm thick soft iron nickel coated enclosures providing immunity to outside magnetic fields and a quiet and noise free performance.

* MC transformers also made to specification.
For details please contact the factory or dealer.

STEREOPHILE CLASS A RATING

CD PLAYER-TRANSPORT

CDT-100 神廟CD播放機

CDT-100 is YPSILON's top loader cd player/transport. A transport's primal objective is to retrieve data from the cd-disc with as much accuracy as possible. The laser head is extremely sensitive to vibrations so CDT-100 provides a rigid and resonant free construction.

The CDT 100 is a stand-alone product which will outperform many highly regarded separate Transport and Dac combinations. It carries an SPDIF output so it can be linked to any outboard DAC.

D/A CONVERTER

DAC-100 神廟解碼

DAC-100 is YPSILON's D to A converter. It is a non-oversampling, no upsampling design with multi-bit dac chips.

I/V conversion is done by a specially designed, built in house transformer, wound with sophisticated techniques for a totally transparent sound.

The analog stage uses single-ended class A

transformer coupled triodes with valve rectification and choke regulation.

The valves are the high mu, high transconductance, low noise SIEMENS C3g NOS tubes.

DAC-100 D/A converter is also 24bit/192Khz capable used in high resolution digital sources.

PUSH PULL HYBRID MONOBLOCK POWER AMPLIFIER

Hyperion 聖島單聲道後級

Ypsilon Hyperion膽石混合單聲道後級，輸出級採用平衡晶體管單端放大架構，5687電子管A類增益級放大的設計，Ypsilon手工制作的變壓器、電感器等元件，提供純淨的極致聲音放大輸出，提供100W的純甲類功率放大輸出，支持甲乙類400W/8歐、1000W/2歐的輸出。Ypsilon Hyperion每臺質量約90 公斤！定位于頂級市場。

PST 100 TA 愛琴海前級

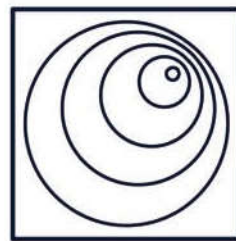

PST 100 is also available without the valve stage for systems that don't require additional gain. This version is equipped with the transformer attenuators and is called PST 100 TA. Notice that it is fully upgradeable to the full version at any time by returning to factory
